

Commercial and Regional Transport Aircraft Pilot Reports (Aviation Week and Space Technology Book)

Aviation Week Pilot Report, one of the most anticipated and weekly read features of Aviation Week & Space Technology magazine, features the nations premier aviation writers reporting on their experiences flying state-of-the-art or otherwise noteworthy aircraft. For the first time, a collection of more than 40 of these firsthand accounts is available in a single volume. Featuring flights of aircraft such as the Airbus A330/340, SAAB 2000, McDonnell Douglas MD90, Fokker 70, and many more, this book will prove invaluable to pilots-especially those who fly for global, national, or regional carriers. Each column covers a different commercial or regional transport aircraft, describing important flight characteristics and providing insights that can be gained only through actually flying the aircraft. In addition to many high-quality photographs, this unique reference contains a foreword by award-winning Aviation Week Northeast Bureau Chief, David Hughes.
